

Community Action Plan

Purpose

This document has been compiled by Beeston Hill Community Association (BHCA) from feedback received at BHCA's community meeting held on 28th July 2025. The meeting was called to hear residents' concerns around local issues that are affecting their health and wellbeing. These SMART (Specific, Measurable, Achievable, Relevant, Time-bound) targets will be presented to the Council (LCC) and Police (WYP) in good faith, with the expectation that the issues raised will be actioned in accordance with the targets' scope and time-frame.

Scope

BHCA is a community-led association with no political ties to the council. BHCA represents residents from the area defined in appendix 1. As an association representing approximately 7,700 residents and 2,600 households in the area, BHCA aims to unite and amplify these voices, and help the individuals hold LCC and WYP accountable.

The targets set out in this document are a true reflection of the issues that have been raised to BHCA in the course of the community meetings.

Aims

The aim of the targets is that LCC and WYP will act on the concerns of the local residents and implement positive long-term and sustainable investments, policies, and procedures that will materially improve the lives of all the residents in Beeston Hill.

Methodology

The targets have been compiled by BHCA from feedback given directly to the committee, voiced at the community meetings, or seen regularly on local social media groups.

The targets will be voted on in the community meetings held on 29th September 2025. A simple show of hands (50% majority) will be used to ratify the targets. These targets will then be distributed to relevant stakeholders and made publicly available.

The targets will be kept under regular review, in line with the timescales set out in them. Progress on the targets made by LCC and WYP, or lack thereof, will be reported back to residents at regular community meetings.

Targets

- 1. Reduce fly-tipping incidents by 33% (from a baseline of reported incidents in 2025, as per LCC waste management data) through enhanced enforcement patrols, community education campaigns, and installation of surveillance in high-risk areas, by the end of May 2026.**
- 2. Install 15 “No dog fouling” signs in 15 identified hotspots (based on resident reports and LCC data from the past 12 months) and launch a supporting awareness campaign via local newsletters and social media, by the end of January 2026.**
- 3. Increase the availability of support for drug use and mental health by expanding session capacity in existing services (such as local counselling centres and outreach programs): Achieve a 25% increase in mental health session slots (from 2025 baseline levels, measured by service provider reports) and a 15% increase in drug rehabilitation program slots (from 2025 baseline levels), through partnerships with local health providers, by the end of September 2026.**
- 4. Host police drop-in surgeries twice per month at rotating community venues where residents can meet officers face-to-face for support, reporting incidents, and receiving updates on local issues; ensure at least 80% of sessions are attended by a minimum of two officers, operational and tracked via attendance logs starting by the end of January 2026.**
- 5. Develop and implement a joint LCC-WYP plan for addressing sex worker related issues, created in collaboration with residents, sex worker advocacy and protection groups (such as “Sex Work Project” “MindWell” and “Joanna Project”), and health/safety experts; the plan must include measures for resident safety (e.g., targeted patrols), sex worker protection (e.g., access to support services), and prevention (e.g., outreach programs), with the plan publicly published by July 2026 and key actions (e.g., at least**

50% of outlined measures) implemented and reviewed for effectiveness by September 2026.

- 6. Conduct a Living Streets Community Street Audit with at least 30 residents by March 2026 to identify and prioritise bad parking and street clutter issues (e.g., pavement parking, misplaced bins, overgrown hedges) in Beeston Hill, and implement solutions in at least 10 priority sites (e.g., introducing pavement parking restrictions, bin storage guidelines, or hedge maintenance notices as per Living Streets' Safe Streets for All recommendations), achieving a 25% reduction in resident-reported complaints about bad parking and street clutter (from 2025 baseline, per LCC/WYP data), by July 2026.**

Count of those in favour _____

Count of those against _____

Agreed upon on (date) _____

Signed (BHCA committee and councillors)
